

Lagoon update

Aug 3 2021 Guy Trembley and myself went out to Duffield Lagoon to see operation of evaporators that they have installed in their lagoon. These evaporators were impressive and offer another option in regards to bring our lagoon online. We also met with Michelle Leslie, manager of wastewater services Parkland. She was extremely helpful and gave us contact information, and costs of operation of this system.

On Sept 6 lagoon manager Brett Henkel met with Guy Trembley and myself at lagoon. Checked out discharge inspection sites and took lazer measurements of lagoon levels. Water levels were 43 inches below top of berms and 6 inches below max height. Chad from Morrison Hershfield was contacted, with this information, and is arranging a time to come out for inspection. Lagoon meeting is set for Sept 23, when we will update new committee members and discuss our forthcoming options and budgets for next phase.

Munis 101

First session on Sept 14. Good review of basic municipal governance, and pertinent discussion of closed sessions and requirements for same.
